### **C Programming Course Notes - Functions**

A declaration with the word "extern" is like a function prototype - It tells the compiler of the existence of the variable, without actually creating it or allocating any space for it. All such variables must be declared exactly once, ( i.e. in one file only of a multi-file development project ) without the "extern", so that space can be allocated for it.

### **contains Function - msdn.microsoft.com**

Checks whether the first argument string contains the second argument string. If an argument is not of type string, it is first converted to a string using the string

### **Whitespace (DB2 XQuery) - IBM DB2 9.7 for Linux, UNIX, and ...**
